What is HD lighting? Sensio Lighting provides the answers

Leading manufacturer of chic energy efficient lighting products, Sensio, wants to tell the world about the latest innovations to its new range.

So what is *HD* or *Higher Definition* lighting? Put simply, it is an innovative new lens that is put over each LED diode to create more intense light. The LED's produce no flickers or noise and importantly they do not radiate UV Rays.

Despite producing a much higher light output than a standard LED, this upgrade is just as energy efficient with fittings running from only 1.65W. Comparatively, the 1.65W LED provides the equivalent light as a 45-50W halogen but with far less energy consumed. Everyone is trying to watch their budgets, so these lights are great for those looking to save on energy bills.

With an impressive longer lifespan of 60,000 hours which is much higher than the average LED, massive savings can be made on replacement lamps. This is equally another great eco friendly aspect, as fewer replacements results in less landfill.

The HD LED 24V Triangle Light with Sensor SE9001HDS pictured above is supplied with a 2.5m LED cable and mini plug and retails from £35 including vat. The entire new LED HD lighting range can be found on the website at www.sensio.co.uk or alternatively, please call Sensio at 0845 0340 780.
